DATA ENGINEER | PALANTIR FOUNDRY SPECIALIST

Results-driven **Data Engineer with 4.5 years of experience**, including **2+ years of hands-on expertise in Palantir Foundry**, building scalable data platforms and enterprise-grade ETL pipelines. **Recognized with Infosys Rise Award and Insta Award for rapid learning and high-impact delivery**, with proven expertise in delivering real-time analytics and workflow automation solutions across manufacturing and financial domains.

TECHNICAL SKILLS

Languages	: Python, SQL
Frameworks & Libraries	: PySpark
Databases	: Snowflake, MSSQL
Platform/Tools	: Palantir Foundry, Git, GitLab, Jira, VSCode, ServiceNow, VisualCron
Clouds/Big Data Tools	: Microsoft Azure, Palantir Foundry
Other Skills	: ETL Pipelines, Data Modeling, Workflow Orchestration, Data Validation, API Integration, Data Automation

PROFESSIONAL EXPERIENCE

Senior Associate Consultant <i>Infosys Ltd</i>	March 2025 – Present <i>Hybrid – Hinjewadi, Pune, India</i>
- Designed and delivered end-to-end data platforms using Palantir Foundry, enabling scalable manufacturing analytics and real-time decision-making. - Developed and optimized ETL pipelines using PySpark, processing large-scale datasets with improved performance and reliability. - Built Ontology-driven data models and automated workflows, reducing manual effort and enhancing business operations. - Handled complex data scenarios and edge cases, improving data accuracy and pipeline robustness. - Collaborated with stakeholders to translate business requirements into scalable solutions, earning recognition for rapid learning, problem-solving, and team contribution.	
Software Engineer <i>Cognizant Technology Services</i>	DEC 2021 – March 2025 <i>Hybrid – Hinjewadi, Pune, India</i>
- Built and maintained end-to-end data pipelines using Palantir Foundry, Python, and PySpark, processing high-volume financial datasets including credit card transactions and retirement plan data. - Designed and implemented scalable ETL workflows covering data ingestion, transformation, validation, and modeling across multiple data formats (CSV, Parquet, fixed-width). - Developed data-driven dashboards and analytical solutions to provide insights into business KPIs, transaction trends, and operational metrics. - Ensured data quality, security, and compliance through robust validation frameworks, error handling, and secure data transfer mechanisms (SFTP, GoAnywhere). - Automated workflows and optimized performance using VisualCron, workflow orchestration, and Azure-based infrastructure (VMs, VNETs), improving efficiency and reducing manual effort.	

EDUCATION

Savitribai Phule Pune University <i>Bachelor of Engineering in Information Technology CGPA: 7.81</i>	Pune, India <i>June 2017 – July 2021</i>
---	---

CERTIFICATIONS

Microsoft Azure Fundamentals (AZ-900)

AWARDS & RECOGNITION

- Rise Award (Infosys)** : Recognized for outstanding contributions, rapid learning, and impactful delivery in Palantir Foundry-based solutions.
- Insta Award (Infosys)** : Awarded for quickly upskilling and effectively implementing learnings into live project use cases.
- Onshore Appreciation** : Commended for contributions to W360 TMH and Production Planning use cases, highlighting strong problem-solving, rapid platform mastery, and team collaboration.

PROJECTS

Toyota Manufacturing Ltd (Palantir Foundry)

Palantir Foundry, PySpark, Python, VS Code, GitLab, Jira

March 2025 - Present

Infosys - Pune

- Architected and scaled **Palantir Foundry data pipelines** enabling real-time production analytics and business insights.
- Built **end-to-end ETL workflows** integrating multiple sources including Snowflake, APIs, and enterprise systems.
- Designed **Ontology objects and relationships**, improving operational decision-making across production and sales planning.
- Developed **PySpark-based transformation layers**, optimizing performance and reducing execution time of pipelines.
- Implemented **data validation and quality frameworks**, ensuring high reliability of critical manufacturing datasets.
- Enabled **automated production planning workflows**, reducing manual intervention and improving operational efficiency.
- Contributed to **deployment, monitoring, and optimization** of production-grade Foundry pipelines.

M&T Bank Corporation (Data Engineering / Palantir Foundry)

Palantir Foundry, PySpark, Python, Github, Jira, VS Code

June 2024 - March 2025

Cognizant - Pune

- Developed **data pipelines in Palantir Foundry** to process and transform large-scale **credit card transaction data** for analytics and reporting.
- Designed and implemented **end-to-end data workflows**, including ingestion, transformation, and data modeling for financial datasets.
- Built **interactive dashboards and analytical views in Foundry**, enabling business users to monitor transaction trends, spending patterns, and key KPIs.
- Worked with **Ontology and dataset modeling** to structure transaction data for efficient querying and visualization.
- Implemented **data validation and cleansing logic**, ensuring high accuracy and consistency of financial data.
- Contributed to **automation and orchestration of workflows**, reducing manual effort and improving turnaround time.

Voya Financial (Data Engineer)

Python, PySpark, MSSQL, GitLab, Pytest, VSCode

June 2022 - June 2024

Cognizant - Pune

- Engineered **scalable ETL pipelines using Python and PySpark** to process multi-source financial data (CSV, Parquet, fixed-width) and transform it into Relius-compatible formats for retirement plan management.
- Designed robust **data transformation and validation frameworks**, ensuring high data accuracy, consistency, and compliance across vendor datasets.
- Managed secure file ingestion and distribution using **GoAnywhere (SFTP)**, handling sensitive financial data across multiple upstream systems.
- Automated pipeline execution and scheduling using **VisualCron**, significantly reducing manual effort and improving operational efficiency.
- Worked on **Azure-based infrastructure**, including Virtual Machines and Virtual Networks, supporting deployment and execution of data processing workflows.
- Improved data processing reliability by implementing **error-handling mechanisms**.
- Collaborated with cross-functional teams to **integrate new data sources and optimize data ingestion workflows**.

Mini Project: PG Management Web Application

Python, Django, MSSQL, HTML/CSS, Github

May 2022 - June 2022

- Developed a **Django-based** application for tenant and billing management with **MSSQL** as the backend.
- Implemented CRUD operations using **Django ORM** and created dynamic, user-friendly templates for administrators.
